Smart FACE MATCH App

Do you often check ID cards and passports in your job? How do you make sure that the person in front of you and the face on the card are actually identical?

Smart FACE|MATCH helps border guards to identify whether the person in front of them is the same as on the ID document. Because the distances of eyes, nose and chin are characteristic for a person, whether wearing a beard or a different hairstyle, you can easily tell if something seems amiss.

Match a person to their ID

Slide division
horizontally & vertically
